POLIMUN ND EDS IB MAX

STRONG AND LONG-LASTING IMMUNITY IN LAYING HENS AND REPRODUCTIVE BREEDERS

AVIAN INFECTIOUS BRONCHITIS VIRUSES

strain M-41 (Mass)
strain BK-07 (793/B)
strain VAR2/V2 (VAR2)

EGG DROP SYNDROME VIRUS

strain EDS-76

NEWCASTLE DISEASE VIRUS

strain La Sota

THE MOST ADVANCED ADJUVANT — WATER/OIL/WATER (W/O/W)

Stimulates a powerful and long-lasting immune response; absence of severe pain and post-vaccination reactions

Product Description

- Protecting chicken flocks from loss of productivity associated with reproductive syndrome
- Broad cross-protection against current strains of IB virus
- Formation of a rapid immune response, long-lasting protection

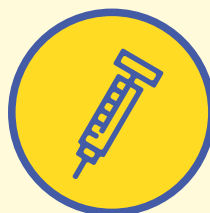

- Gentle and painless injection, minimizing stress for the birds
- Simplified vaccination schedule (no need to use live vaccines during the productive period)
- Saving money and labor costs

Laying hens,
parent flocks

90-100 days

Intramuscularly,
subcutaneously

0.5 ml/head
once
